AMENDMENTS TO THE CLAIMS

1. (ORIGINAL) A vehicle headlamp comprising:

one light source;

light distribution-forming first reflecting surface

light distribution irradiating forming first shape

diagonally rising portion of the light distribution on the road

side in a spot form by the light from the light source, and

consisting of double reflecting surfaces, that is, a primary

reflecting surface which is an elliptic type, and a secondary

reflecting surface which is a parabolic type;

light distribution-forming reflecting surface second

second light distribution shape irradiating forming a

horizontally wide range below the horizontal line by the light

from the light source, and consisting of double reflecting

surfaces, that is, a primary reflecting surface which is an

elliptic type, and a secondary reflecting surface which is a

parabolic type; and

distribution-forming reflecting light

distribution shape forming a third light irradiating

relatively narrow range horizontally below the horizontal line

by the light from the light source,

Group Art Unit:

wherein at least one of the first light distribution-

forming reflecting surface to the third light distribution-

the horizontal forming reflecting surface is rotatable in

direction.

2. (ORIGINAL) The vehicle headlamp according to claim 1,

the of the first light distribution-forming wherein turn

reflecting surface to the third light distribution-forming

reflecting surface is such that the at least one is the second

light distribution-forming reflecting surface, and is linked

with the operation of a steering unit.

3. (CURRENTLY AMENDED) The vehicle headlamp according to

claims 1 or 2, wherein the third light distribution-forming

reflecting surface is also linked with the operation of the

steering unit.

4. (ORIGINAL) The vehicle headlamp according to claim 1,

first light distribution-forming wherein the turn οf the

reflecting surface the third light distribution-forming to

such that reflecting surface is all of the first light

reflecting surface distribution-forming to the third light

distribution-forming reflecting surface is linked with the

operation of the steering unit, and the turn of the first light

distribution-forming reflecting surface is conducted only at the

driving time of the vehicle, the turn of the second light

distribution-forming reflecting surface is conducted at the

driving and standing time of the vehicle, and the turn of the

third light distribution-forming reflecting surface is

conducted, synchronized with the turn of the first light

distribution-forming reflecting surface or the second light

distribution-forming reflecting surface.

5. (ORIGINAL) The vehicle headlamp according to claim 2,

wherein the turn of the second light distribution-forming

reflecting surface is conducted at the time of stopping the

vehicle or driving speed of the vehicle is low.

6. (ORIGINAL) The vehicle headlamp according to claim 2,

wherein the turn of the first light distribution-forming

reflecting surface is conducted at the time of driving the

vehicle or driving speed of the vehicle more faster than driving

speed of the vehicle which turns the second light distribution-

forming reflecting surface.

Group Art Unit:

7. (ORIGINAL) The vehicle headlamp according to claim 4,

wherein the turn of third light distribution-forming the

reflecting surface is also conducted at the time of driving and

stopping the vehicle.

8. (ORIGINAL) The vehicle headlamp according to claim 4,

wherein the turn of the third light distribution-forming

reflecting surface is conducted only at the driving time of the

vehicle.

9. (CURRENTLY AMENDED) The vehicle headlamp according to

any one of claims 1 to 6, wherein the turn of the first light

distribution-forming reflecting surface to the third light

distribution-forming reflecting surface is conducted by

corresponding light distribution-forming reflecting surface in

the vehicle headlamp installed on the side of the turning

direction to which the steering unit in the vehicle body is

operated.

10. (CURRENTLY AMENDED) The vehicle headlamp according to

any one of claims 2-to 7, wherein selection of linkage or non-

linkage with the operation of the steering unit, and selection

of the linkage at the driving time or at the non-driving time,

-5-

of at least one of the first light distribution-forming

reflecting surface to the third light distribution-forming

reflecting surface can be set at the time of delivering the

vehicle to a user or can be set by the user.

11. (NEW) The vehicle headlamp according to claim 2,

wherein the third light distribution-forming reflecting surface

is also linked with the operation of the steering unit.

12. (NEW) The vehicle headlamp according to claim 11,

wherein the turn of the first light distribution-forming

reflecting surface to the third light distribution-forming

reflecting surface is conducted by a corresponding light

distribution-forming reflecting surface in the vehicle headlamp

installed on the side of the turning direction to which the

steering unit in the vehicle body is operated.

13. (NEW) The vehicle headlamp according to claim 5,

wherein the turn of the first light distribution-forming

reflecting surface to the third light distribution-forming

reflecting surface is conducted by a corresponding light

distribution-forming reflecting surface in the vehicle headlamp

installed on the side of the turning direction to which the

steering unit in the vehicle body is operated.

14. (NEW) The vehicle headlamp according to claim 6,

wherein the turn of the first light distribution-forming

reflecting surface to the third light distribution-forming

reflecting surface is conducted by a corresponding light

distribution-forming reflecting surface in the vehicle headlamp

installed on the side of the turning direction to which the

steering unit in the vehicle body is operated.

15. (NEW) The vehicle headlamp according to claim 7,

wherein the turn of the first light distribution-forming

reflecting surface to the third light distribution-forming

reflecting surface is conducted by a corresponding light

distribution-forming reflecting surface in the vehicle headlamp

installed on the side of the turning direction to which the

steering unit in the vehicle body is operated.

16. (NEW) The vehicle headlamp according to claim 8,

wherein the turn of the first light distribution-forming

reflecting surface to the third light distribution-forming

reflecting surface is conducted by a corresponding light

distribution-forming reflecting surface in the vehicle headlamp

installed on the side of the turning direction to which the

steering unit in the vehicle body is operated.

17. (NEW) The vehicle headlamp according to claim 11,

wherein selection of linkage or non-linkage with the operation

of the steering unit, and selection of the linkage at the

driving time or at the non-driving time, of at least one of the

first light distribution-forming reflecting surface to the third

light distribution-forming reflecting surface can be set at the

time of delivering the vehicle to a user or can be set by the

user.

18. (NEW) The vehicle headlamp according to claim 5,

wherein selection of linkage or non-linkage with the operation

of the steering unit, and selection of the linkage at the

driving time or at the non-driving time, of at least one of the

first light distribution-forming reflecting surface to the third

light distribution-forming reflecting surface can be set at the

time of delivering the vehicle to a user or can be set by the

user.

19. (NEW) The vehicle headlamp according to claim 6,

wherein selection of linkage or non-linkage with the operation

of the steering unit, and selection of the linkage at the

driving time or at the non-driving time, of at least one of the

first light distribution-forming reflecting surface to the third

light distribution-forming reflecting surface can be set at the

time of delivering the vehicle to a user or can be set by the

user.

20. (NEW) The vehicle headlamp according to claim 7,

wherein selection of linkage or non-linkage with the operation

of the steering unit, and selection of the linkage at the

driving time or at the non-driving time, of at least one of the

first light distribution-forming reflecting surface to the third

light distribution-forming reflecting surface can be set at the

time of delivering the vehicle to a user or can be set by the

user.

21. (NEW) The vehicle headlamp according to claim 8,

wherein selection of linkage or non-linkage with the operation

of the steering unit, and selection of the linkage at the

driving time or at the non-driving time, of at least one of the

first light distribution-forming reflecting surface to the third

light distribution-forming reflecting surface can be set at the

time of delivering the vehicle to a user or can be set by the

user.

22. (NEW) The vehicle headlamp according to claim 9,

wherein selection of linkage or non-linkage with the operation

of the steering unit, and selection of the linkage at the

driving time or at the non-driving time, of at least one of the

first light distribution-forming reflecting surface to the third

light distribution-forming reflecting surface can be set at the

time of delivering the vehicle to a user or can be set by the

user.
